Cut #1 and Cut #2 are brown and you cannot record a voice track in Simian Remote

This can happen if you do not right-click in the voice track editor section and select "**Get cut segments from host**" after loading the cuts.

The best way to avoid this is to right-click in the voice track editor and select "**Automatically get cuts on load**". This way, the Simian Remote Client will always automatically get the cut segments when loading cuts from the log with no action needed from the user.
