What's New in Simian 2.3.0?

Simian 2.3.0 is the latest iteration of the Simian application. It contains numerous new and updated features, most notably:

- **New 64bit/32bit compatible audio engine** – Use Simian 2.3.0 on Windows 7 64 bit, Windows 8 32/64 bit, and Windows 8.1 32/64 bit
- **Simian File Sync Utility** – Sync and backup your audio files and logs, trigger sets, hotkey sets, and more, all automatically, and without third-party software.
- **New Weather and Forecast Background Service*** – New built-in utility to automatically retrieve weather and forecast information. You no longer need to deal with the GETWEATHER and GETFORECAST macros!
- **Configurable Segue Fader Curve** – Set the shape of the fade on segue. Now cross-fading is also an option in addition to simple fade-out.
- **New Hardware Connector Functionality*** – Add-on Hardware Connector background services for integration between Simian and third party hardware. Hardware Connectors are currently available at the time of writing this document for Axia console/GPIO nodes/PC Audio Driver and for GatesAir PR&E Oasis console. Hardware Connectors for other hardware may be made available in the future.
- **New Email Notification Engine** – Receive email notifications when there is a playback/AutoReplace error, program log is changed by user, CHAIN macro error, crash recovery was engaged after a restart, Simian is closed by the user, program or hardware options are accessed by user, or the security options window is accessed by the user.

* Available for Simian Pro only.
